Climate Change Reconsidered II: Physical Science Craig D. Idso, Robert M. Carter, S. Fred Singer

This report is produced by the Nongovernmental International Panel on Climate Change (NIPCC), a joint project of the Center for the Study of Carbon Dioxide and Global Change, Science & Environmental Policy Project, and The Heartland Institute. Three lead authors--Craig D. Idso, Robert M. Carter, and S. Fred Singer--assembled and worked closely with nearly 50 chapter lead authors, contributors, and reviewers from 15 countries. This volume was subjected to the common standards of peer-review.

This work provides the scientific balance missing from the overly alarmist reports of the United Nations Intergovernmental Panel on Climate Change (IPCC), which are highly selective in their review of climate science and controversial with regard to their projections of future climate change.

Although the IPCC claims to be unbiased and to have based its assessment on the best available science, we have found this to not be the case. In many instances conclusions have been seriously exaggerated, relevant facts have been distorted, and key scientific studies have been ignored. NIPCC authors paid special attention to contributions that were either overlooked by the IPCC or that contain data, discussion, or implications arguing against the IPCC's claim that dangerous global warming is resulting, or will result, from human-related greenhouse gas emissions.

Most notably, the authors of CCR-II say the IPCC has exaggerated the amount of warming they predict to occur in response to future increases in atmospheric CO₂. Any warming that may occur is likely to be modest and cause no net harm to the global environment or to human well-being. A careful reading of CCR-II reveals thousands of peer-reviewed scientific journal articles that do not support, and indeed often contradict, the IPCC's alarmist perspective on climate change. This is not an exercise in cherry picking: There are simply too many articles by too many prominent scientists, reporting too much real-world data and not merely opinions. Either the IPCC purposely ignores these articles because they run counter to their predetermined thesis that man is causing a climatic crisis, or the IPCC's authors are incompetent and failed to conduct a proper scientific investigation. Either way, the IPCC is misleading the scientific community, policymakers, and the general public by telling only half the story about the science of climate change.

If the IPCC truly considered and acknowledged all pertinent science in its assessment reports, there would be no need for a NIPCC. Until such time as the IPCC changes its ways (or is dissolved), NIPCC will continue to inject balance into the scientific debate by finding and reporting the scientific research that the IPCC overlooks. Much of it deals with natural climate processes or variability, weaknesses in climate models and data sets used to measure temperatures or forecast future climate conditions, or with data that raise serious scientific questions about the IPCC's attribution of climate change to human greenhouse gas emissions.

Our sole goal in presenting this information is to enable fellow scientists, elected officials, educators, and the general public to make up their own minds about what the science says, to understand climate change rather than simply believe in it. Each of the seven chapters in this volume begins with a list of key findings that contradict those of the IPCC. These findings are then discussed in detail using in-depth reviews and analyses of literally thousands of scientific papers. Full citations to the work reviewed are presented at the end of each section.

From reader reviews:

Alfred Zoeller:

What do you concerning book? It is not important with you? Or just adding material when you really need something to explain what you problem? How about your spare time? Or are you busy man? If you don't have spare time to perform others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every person has many questions above. They should answer that question simply because just their can do which. It said that about reserve. Book is familiar in each person. Yes, it is right. Because start from on pre-school until university need this Climate Change Reconsidered II: Physical Science to read.

Elizabeth Parker:

This book untitled Climate Change Reconsidered II: Physical Science to be one of several books this best seller in this year, here is because when you read this e-book you can get a lot of benefit into it. You will easily to buy that book in the book retail outlet or you can order it through online. The publisher of this book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Cell phone. So there is no reason to your account to past this publication from your list.

Larry Parrish:

Is it an individual who having spare time after that spend it whole day by means of watching television programs or just resting on the bed? Do you need something new? This Climate Change Reconsidered II: Physical Science can be the reply, oh how comes? The new book you know. You are thus out of date, spending your extra time by reading in this brand-new era is common not a nerd activity. So what these ebooks have than the others?

Tim Gonzalez:

Reading a e-book make you to get more knowledge as a result. You can take knowledge and information from the book. Book is composed or printed or created from each source that filled update of news. On this modern era like at this point, many ways to get information are available for you. From media social like newspaper, magazines, science book, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Are you ready to spend your spare time to open your book? Or just looking for the Climate Change Reconsidered II: Physical Science when you necessary it?
