Statistical Methods in Molecular Evolution (Statistics for Biology and Health)

Statistical Methods in Molecular Evolution (Statistics for Biology and Health)

In the field of molecular evolution, inferences about past evolutionary events are made using molecular data from currently living species. With the availability of genomic data from multiple related species, molecular evolution has become one of the most active and fastest growing fields of study in genomics and bioinformatics.

Most studies in molecular evolution rely heavily on statistical procedures based on stochastic process modelling and advanced computational methods including high-dimensional numerical optimization and Markov Chain Monte Carlo. This book provides an overview of the statistical theory and methods used in studies of molecular evolution. It includes an introductory section suitable for readers that are new to the field, a section discussing practical methods for data analysis, and more specialized sections discussing specific models and addressing statistical issues relating to estimation and model choice. The chapters are written by the leaders of field and they will take the reader from basic introductory material to the state-of-the-art statistical methods.

This book is suitable for statisticians seeking to learn more about applications in molecular evolution and molecular evolutionary biologists with an interest in learning more about the theory behind the statistical methods applied in the field. The chapters of the book assume no advanced mathematical skills beyond basic calculus, although familiarity with basic probability theory will help the reader. Most relevant statistical concepts are introduced in the book in the context of their application in molecular evolution, and the book should be accessible for most biology graduate students with an interest in quantitative methods and theory.

Rasmus Nielsen received his Ph.D. from the University of California at Berkeley in 1998 and after a postdoc at Harvard University, he assumed a faculty position in Statistical Genomics at Cornell University. He is currently an Ole Rømer Fellow at the University of Copenhagen and holds a Sloan Research Fellowship. He is an associate editor of the *Journal of Molecular Evolution* and has published more than fifty original papers in peer-reviewed journals on the topic of this book.

From the reviews:

"...Overall this is a very useful book in an area of increasing importance." *Journal of the Royal Statistical Society*

"I find *Statistical Methods in Molecular Evolution* very interesting and useful. It delves into problems that were considered very difficult just several years ago...the book is likely to stimulate the interest of statisticians that are unaware of this exciting field of applications. It is my hope that it will also help the 'wet lab' molecular evolutionist to better understand mathematical and statistical methods." *Marek Kimmel for the Journal of the American Statistical Association, September 2006*

"Who should read this book? We suggest that anyone who deals with molecular data (who does not?) and anyone who asks evolutionary questions (who should not?) ought to consult the relevant chapters in this book." *Dan Graur and Dror Berel for Biometrics, September 2006*

"Coalescence theory facilitates the merger of population genetics theory with phylogenetic approaches, but still, there are mostly two camps: phylogeneticists and population geneticists. Only a few people are moving freely between them. Rasmus Nielsen is certainly one of these researchers, and his work so far has merged many population genetic and phylogenetic aspects of biological research under the umbrella of molecular evolution. Although Nielsen did not contribute a chapter to his book, his work permeates all its chapters. This book gives an overview of his interests and current achievements in molecular evolution. In short, this book should be on your bookshelf." *Peter Beerli for Evolution, 60(2), 2006*

From reader reviews:

Jerry Brock:

This book entitled Statistical Methods in Molecular Evolution (Statistics for Biology and Health) to be one of several books this best seller in this year, honestly, that is because when you read this guide you can get a lot of benefit on it. You will easily to buy that book in the book retail store or you can order it via online. The publisher with this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Touch screen phone. So there is no reason to your account to past this guide from your list.

Marlene Wiedman:

Playing with family in a park, coming to see the water world or hanging out with pals is thing that usually you might have done when you have spare time, then why you don't try point that really opposite from that. One activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love Statistical Methods in Molecular Evolution (Statistics for Biology and Health), you are able to enjoy both. It is excellent combination right, you still need to miss it? What kind of hang-out type is it? Oh occur its mind hangout fellas. What? Still don't obtain it, oh come on its known as reading friends.

Robert Harriman:

Do you have something that you want such as book? The e-book lovers usually prefer to choose book like comic, short story and the biggest the first is novel. Now, why not trying Statistical Methods in Molecular Evolution (Statistics for Biology and Health) that give your enjoyment preference will be satisfied simply by reading this book. Reading practice all over the world can be said as the opportunity for people to know world far better then how they react toward the world. It can't be said constantly that reading addiction only for the geeky individual but for all of you who wants to end up being success person. So , for all of you who want to start looking at as your good habit, it is possible to pick Statistical Methods in Molecular Evolution (Statistics for Biology and Health) become your personal starter.

Jean Fair:

Are you kind of occupied person, only have 10 as well as 15 minute in your moment to upgrading your mind proficiency or thinking skill also analytical thinking? Then you are receiving problem with the book than can satisfy your short period of time to read it because pretty much everything time you only find guide that need more time to be learn. Statistical Methods in Molecular Evolution (Statistics for Biology and Health) can be your answer as it can be read by you actually who have those short free time problems.
