Techniques in Liver Surgery is a practical textbook giving a clear, step-by-step account of the many techniques now used in liver surgery, ranging from the standard approaches to liver resection and transplantation, through to advanced procedures such as major liver resections using hypothermic perfusion, auxiliary liver transplantation and transplantation from living related donors. In addition to specific techniques, the book provides detailed coverage of the surgical anatomy of the liver, the basic approaches to liver surgery and the history of the specialty itself. Throughout, the book is superbly illustrated with detailed colour line drawings, intraoperative photographs and radiological images, providing an invaluable source of information on the surgical anatomy of the liver and all of the common and less common techniques that are likely to be encountered by the hepatobiliary surgeon, both in training and in practice.
