Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) Zhu Keyao, Hongyue Zhu, Biswanath Mukherjee

Optical networks based on wavelength-division multiplexing (WDM) tech nology offer the promise to satisfy the bandwidth requirements of the Inter net infrastructure, and provide a scalable solution to support the bandwidth needs of future applications in the local and wide areas. In a waveleng- routed network, an optical channel, referred to as a lightpath, is set up between two network nodes for communication. Using WDM technology, an optical fiber link can support multiple non-overlapping wavelength channels, each of which can be operated at the data rate of 10 Gbps or 40 Gbps today. On the other hand, only a fraction of customers are expected to have a need for such a high bandwidth. Due to the large cost of the optical backbone infrastruc ture and enormous WDM channel capacity, connection requests with diverse low-speed bandwidth requirements need to be efficiently groomed onto hi- capacity wavelength channels. This book investigates the optimized design, provisioning, and performance analysis of traffic-groomable WDM networks, and proposes and evaluates new WDM network architectures. Organization of the Book Significant amount of research effort has been devoted to traffic grooming in SONET/WDM ring networks since the current telecom networks are mainly deployed in the form of ring topologies or interconnected rings. As the long-haul backbone networks are evolving to irregular mesh topologies, traffic grooming in optical WDM mesh networks becomes an extremely important and practical research topic for both industry and academia.

From reader reviews:

Martin Sanchez:

Hey guys, do you desires to finds a new book to learn? May be the book with the headline Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) suitable to you? The book was written by famous writer in this era. Typically the book untitled Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) is one of several books in which everyone read now. This particular book was inspired a lot of people in the world. When you read this book you will enter the new dimension that you ever know before. The author explained their thought in the simple way, therefore all of people can easily to comprehend the core of this book. This book will give you a wide range of information about this world now. In order to see the represented of the world on this book.

Gene Kirkland:

Typically the book Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) has a lot of information on it. So when you make sure to read this book you can get a lot of benefit. The book was compiled by the very famous author. Mcdougal makes some research just before write this book. That book very easy to read you can get the point easily after perusing this book.

Heather Reader:

In this period of time globalization it is important to someone to get information. The information will make a professional understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You will see that now, a lot of publisher that print many kinds of book. Typically the book that recommended for your requirements is Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) this publication consist a lot of the information of the condition of this world now. This kind of book was represented how does the world has grown up. The vocabulary styles that writer make usage of to explain it is easy to understand. The actual writer made some investigation when he makes this book. That is why this book acceptable all of you.

Scott Burnett:

Reading a publication make you to get more knowledge as a result. You can take knowledge and information from your book. Book is published or printed or illustrated from each source that will filled update of news. On this modern era like now, many ways to get information are available for an individual. From media social just like newspaper, magazines, science book, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Do you want to spend your spare time to spread out your book? Or just trying to find the Traffic Grooming in Optical WDM Mesh Networks (Optical Networks) when you desired it?
