Space Technology Export Controls and International Cooperation in Outer Space (Space Regulations Library) Michael Mineiro

Export controls definitively impact international cooperation in outer space. Civil and commercial space actors that engage in international endeavors must comply with space technology export controls. In the general discourse, members of the civil and commercial space community have an understanding of their domestic export control regime. However, a careful reading of the literature on space technology export controls reveals that certain questions relevant to international engagements have not been identified or answered.

What is the legal-political origin of space technology export controls? How do they relate to the current international legal structure? What steps can be taken to evolve our current unilateral paradigm of space technology within the context of peaceful exploration and use of outer space? In this book, these and other relevant questions on space technology export controls are identified and assessed through an insightful case-study of the U.S. commercial communication export control regime. The findings of this case-study are used in an international legal-political analysis of international space law, public international law, and international cooperation. Breaking new ground in international legal theory, a self-justified security dilemma that is manifest in international law is identified and explained as the origin for the current paradigm of space technology export controls.
