## The Iceman and his Natural Environment: Palaeobotanical Results (The Man in the Ice)

Before the discovery of the "Man in the Ice" in temporal context. On the other hand the reconstruction of the Iceman's life-style as derived from data September 1991, little was known about the Neolithic obtained from the site has to be correlated with the period in the Central Alps. Suddenly and without precedent, here was the very well preserved corpse of a prehistoric man. For that purpose pollen analysis was a man who had lived more than 5,000 years ago with his performed on peat-bogs in the vicinity of the find and clothing and equipment almost intact. The discovery further allowed to obtain precise data on the vegetation was not just deservedly a world-wide sensation but a cover and climate in the Neolithic. Pollen analysis was a unique opportunity for the scientific community to be performed for a vertical transect extending from the vegetation at the life and death of a human from such very timber line almost up to the nival zone. The results of ancient times. It opened up wholly new horizons in the analyses reveal changes to the vegetation patterns prehistoric research, and with the help of a full range caused by pastoral farming long before the time of the modern research techniques an attempt was made to reconstruct the Iceman's environment.
